

I hope that the FCC will reject NAB's petition 04-160. I travel by truck frequently and listen to XM Satellite Radio. Its so nice not to have to hunt around for a station that you can actually tune in as you drive from place to place. There have been many times when I have been able to avoid accidents because I could tune in Traffic and and weather for an area I was driving through on my XM satellite radio. There is no guessing where or if you can find important information. No one can count on a regular radio station providing this information.

Thank you,
Suzie Cook
